

PHOTOSHOP API USERS

v1 reached end of life on August 31

here's the v2 map

1 The timeline

Dates from Adobe's deprecation announcement.

v1 base

`image.adobe.io/pie/psdService/..`

v2 base

`photoshop-api.adobe.io/v2/...`

2 Where the calls went

v1 names on the left, v2 paths on the right.

v1 endpoints shown without their `/pie/psdService/` prefix.

3 Payloads changed too

Same idea, new field names.

v1

v2

`inputs[0].href`

`image.source.url`

`outputs[].href`

`outputs[].destination.url`

`type`

`mediaType`

`quality: 1 to 7`

`quality: "high"`

Update both sides before you test.

4 Replacing a smart object

POST /v2/create-composite

```
"edits": { "layers": [{  
  "type": "smart_object_layer",  
  "name": "Env_Backdrop",  
  "operation": {"type": "edit"},  
  "smartObject": {"isLinked": false,  
    "smartObjectFile":  
      {"source": {"url": "<signed GET>"}}} }  
}]}
```

operation edit is required

isLinked false embeds the file

5 The manifest got richer

Layer types

adjustmentLayer

adjustment_layer

Artboards

plain groups

own artboard type

Locked

one boolean

protection flags

Embedded smart objects

no content access

download URL

v2 generate-manifest, per Adobe's migration guides.

6 A v2 template pipeline

One way to chain it.

Firefly

generate-async: a new backdrop

Photoshop v2

create-composite: swap the smart object

Photoshop v2

execute-actions: localize the headline

Deliver

PSD master plus flat renditions

Which v1 call is hardest to migrate?

Answer in the comments. I read every one.

Manifest

Smart object

Text edits

Renditions

Next, and last: what to tell legal about commercial safety.
