

Multi-brand teams: one org beats an org per brand

Isolate with groups, not new tenants

1

The shape

IMS organization

1

Workfront
instance

0

new tenants per
brand

2

Isolate with groups

Use groups, product profiles, workspaces and folder or record-level permissions.

3

Embargoes

Agencies share one Workfront instance with group-based separation. Lock binaries in AEM too.

3

4

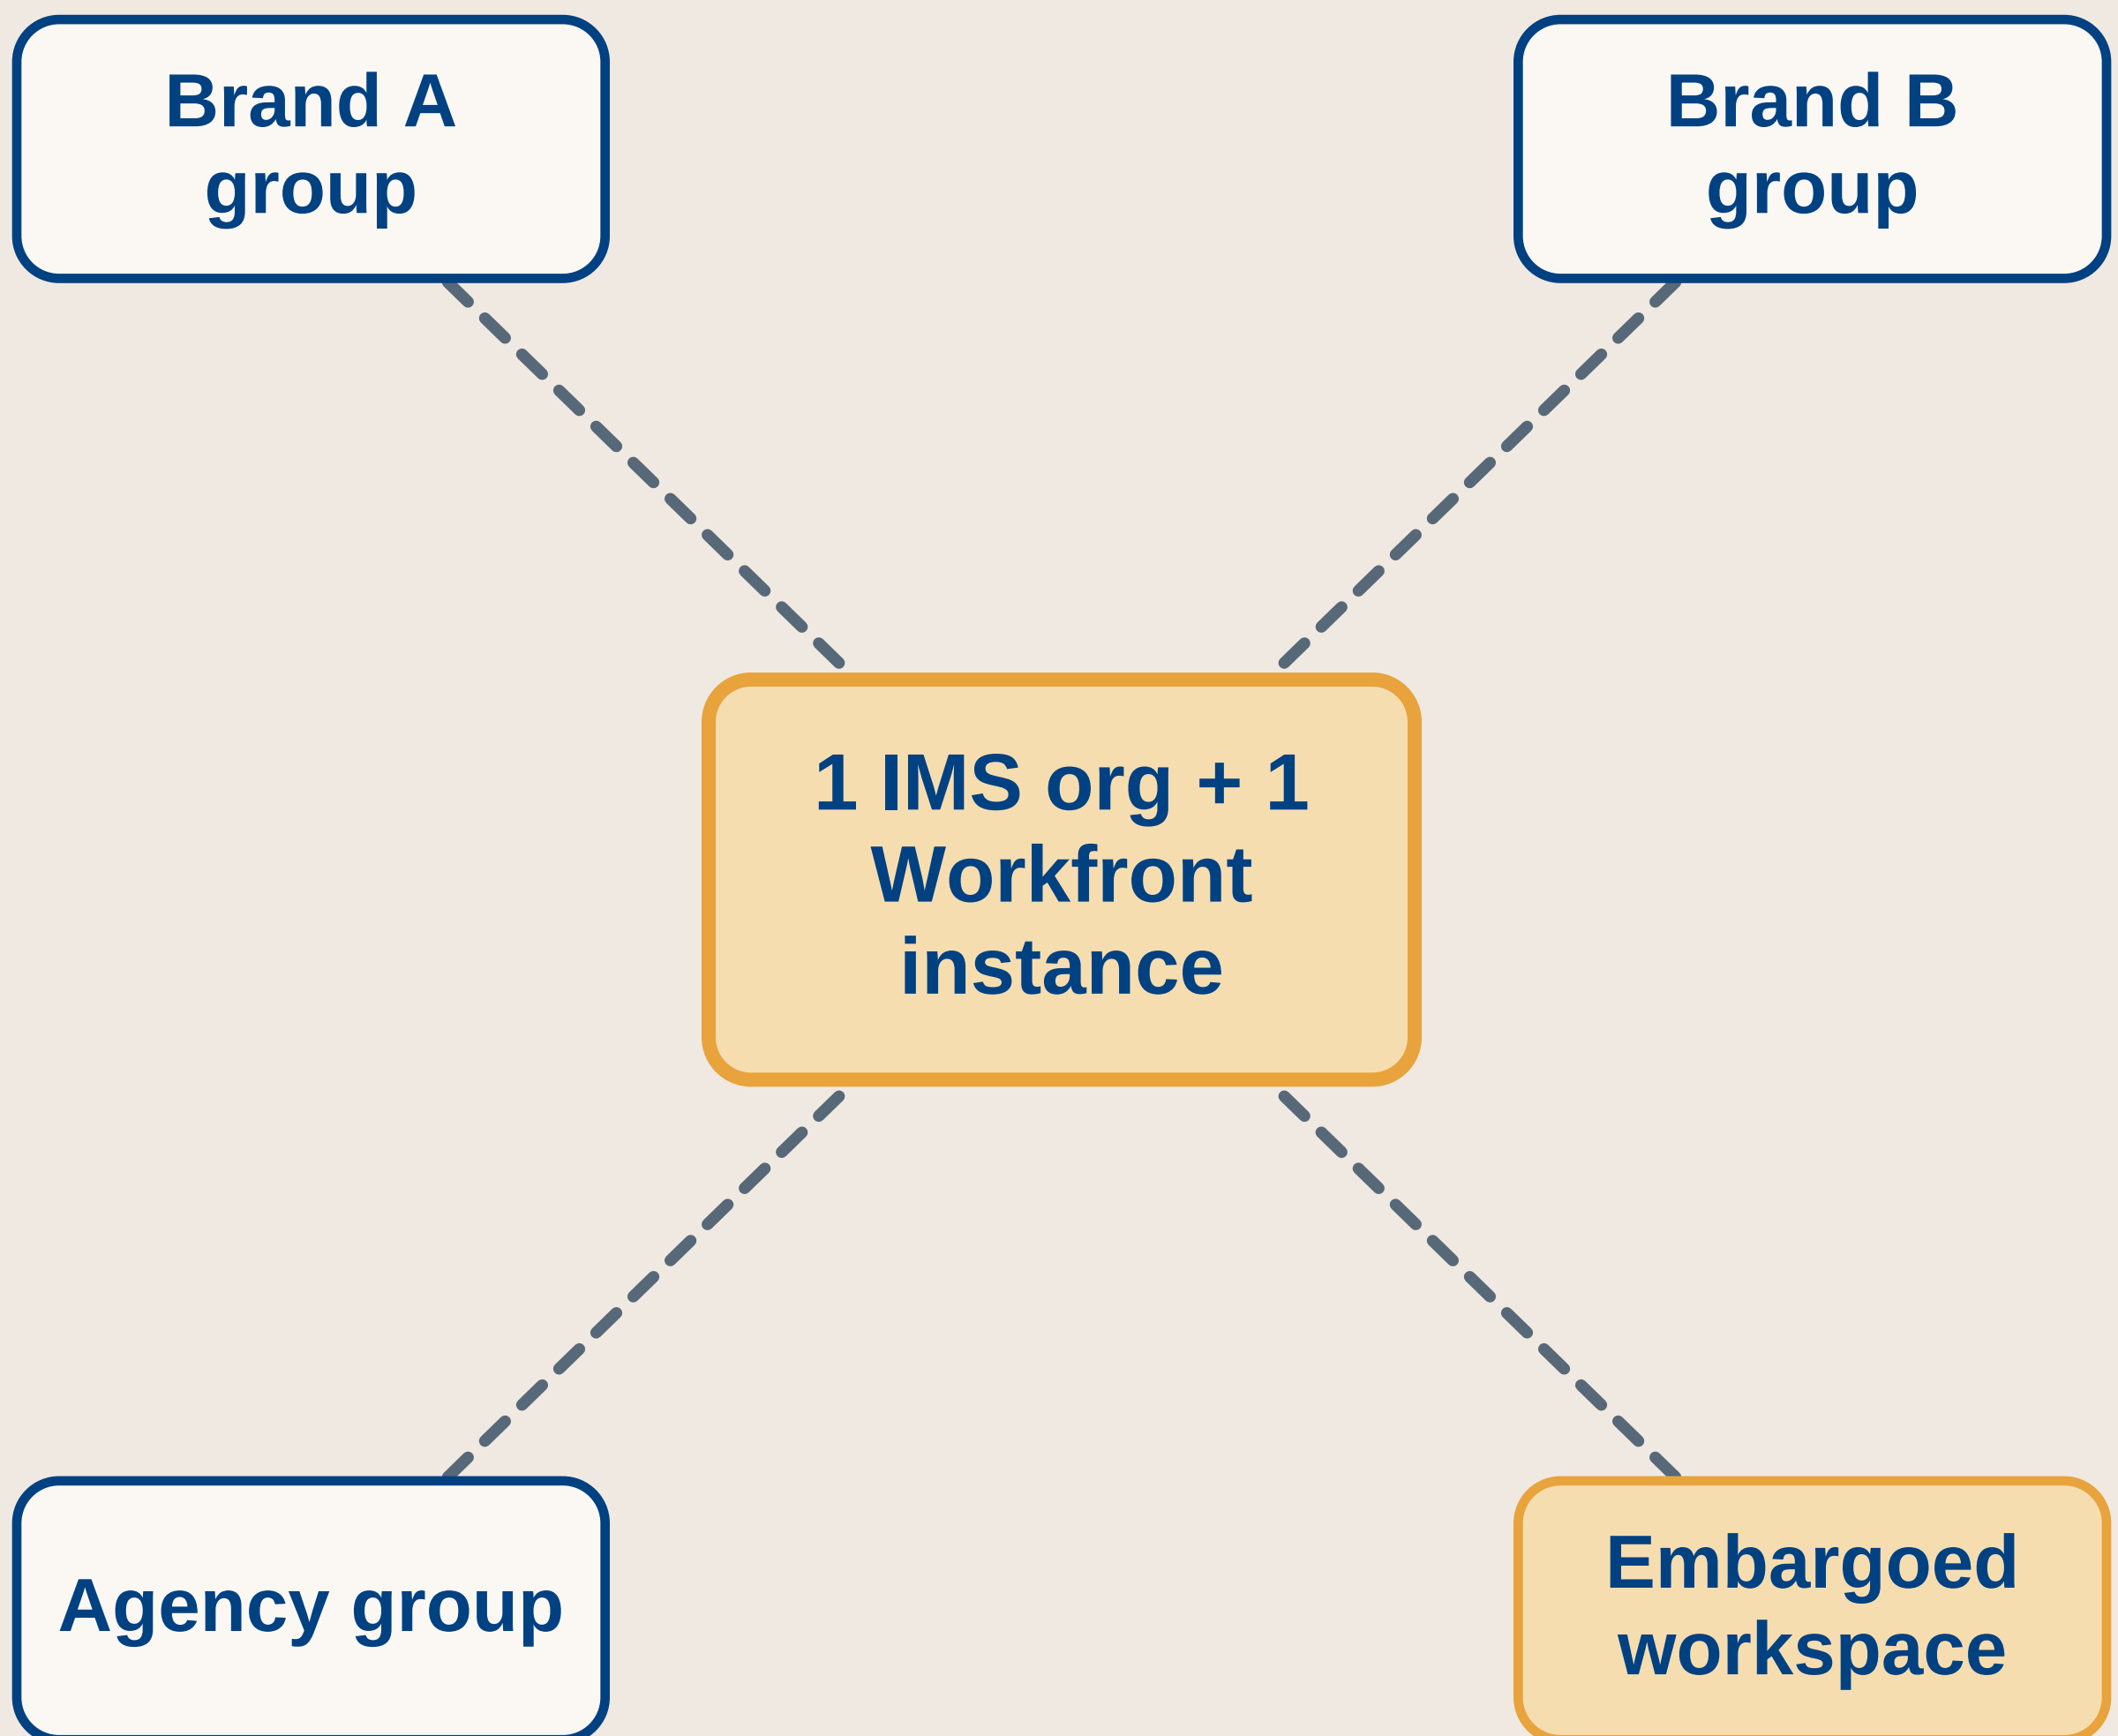

Skip the email chain

Don't use email as the NDA and handoff bus for embargoed work.

4

DIAGRAM

One org, isolated by groups

Workfront AI Collaborators run as permissioned users, so group isolation carries over. Avoid one broad account across brands.

Status as of Sept 2026. Confirm in your own tenant.

BEST PRACTICES

Give each agent the narrowest identity that fits.

Test isolation: same prompt, users from two brands.

Check agent reach in embargoed groups first.

Untagged items are design advice.
