

Enterprise teams: 13 anti-patterns that look like governance

And what to do instead

1

Splitting tenants

An IMS org per brand or a Workfront instance per agency fragments identity and reporting.

2

Wiring point to point

APIs between every system pair break as brands grow. Use Fusion and native connectors.

3

Free text and spreadsheets

Use controlled taxonomy and record
conversion instead.

3

4

Wrong layer

Planning isn't a DAM. Fusion doesn't render UI. GSPM isn't the suite.

4

DIAGRAM

Looks like governance vs what works

Looks like governance

Org per brand

Instance per agency

Point-to-point APIs

Free-text fields

Spreadsheet handoff

Do instead

One org, groups

One instance,
permissions

Fusion + native
connectors

Controlled vocabularies

Record conversion

**Anti-patterns have agent versions:
one broad account, point-to-point
wiring, output as truth, no human
approval.**

ADOBE TOOLS TO KNOW

CX Coworker Gateway

DOCUMENTED

Agent Orchestrator (visible plans)

GA

Governed collaborator registry

DOCUMENTED

Status as of Sept 2026. Confirm in your own tenant.

BEST PRACTICES

Narrow, named, auditable agent identities.

Use a gateway or hub, not pairwise wiring.

Agents propose; humans or rules commit.

Check the IMS org on every MCP connection.

ADOBE DOCS

Untagged items are design advice.
