

Twelve layers, one owner each

Draw the chain by job, not by product.

12 layers

one system of record each

1 Twelve layers, one system of record each

Name the owner before you draw arrows.

2 The rule that keeps it honest

Every data type has exactly one owner.

Pick a data type

campaign, asset, product attributes

Name its single owner

one system of record

Everything else references it

no second copy to reconcile

3 One big box vs twelve layers

Both look tidy on a slide.

✗ One big platform

Every arrow goes into one box

Two systems can both be 'the truth'

Reconciliation jobs everywhere

Hard to debug

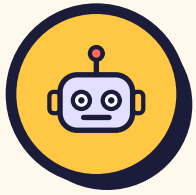

✓ Twelve layers

Each layer has one owner

Others reference, not copy

Integrations have clear edges

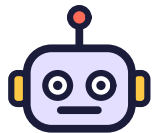

Easy to debug

Agentic angle

Agent Orchestrator plans work across agents and shows its plan. Every data type still needs one owner.

Sources on slide 7

Best practices

Give each agent a layer and named systems of record.

Review the Orchestrator's plan before multi-system runs.

ADOBE DOCS

Log which agent touched which record.
