

Org membership is not access

Why a user in the org still cannot open GenStudio.

in the IMS org

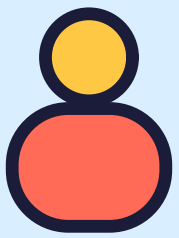

product profile

who you are vs what you can use

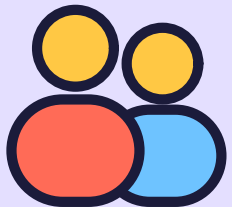

1 How access reaches GenStudio

Authentication says who. A profile says what.

User signs in to the IMS org

authentication only

Added to a user group

provisioned by group

Group linked to a product profile

role-based entitlements

GenStudio opens, and agents too

same permissions for MCP

2 What to automate in onboarding

Access should be a testable check.

Groups

model access as group membership

not per user

Profiles

link groups to product profiles

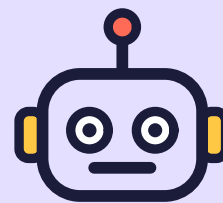

Admin Console

Check

assert the group link for every role

acceptance test

Agents

act as the signed-in user

MCP via IMS

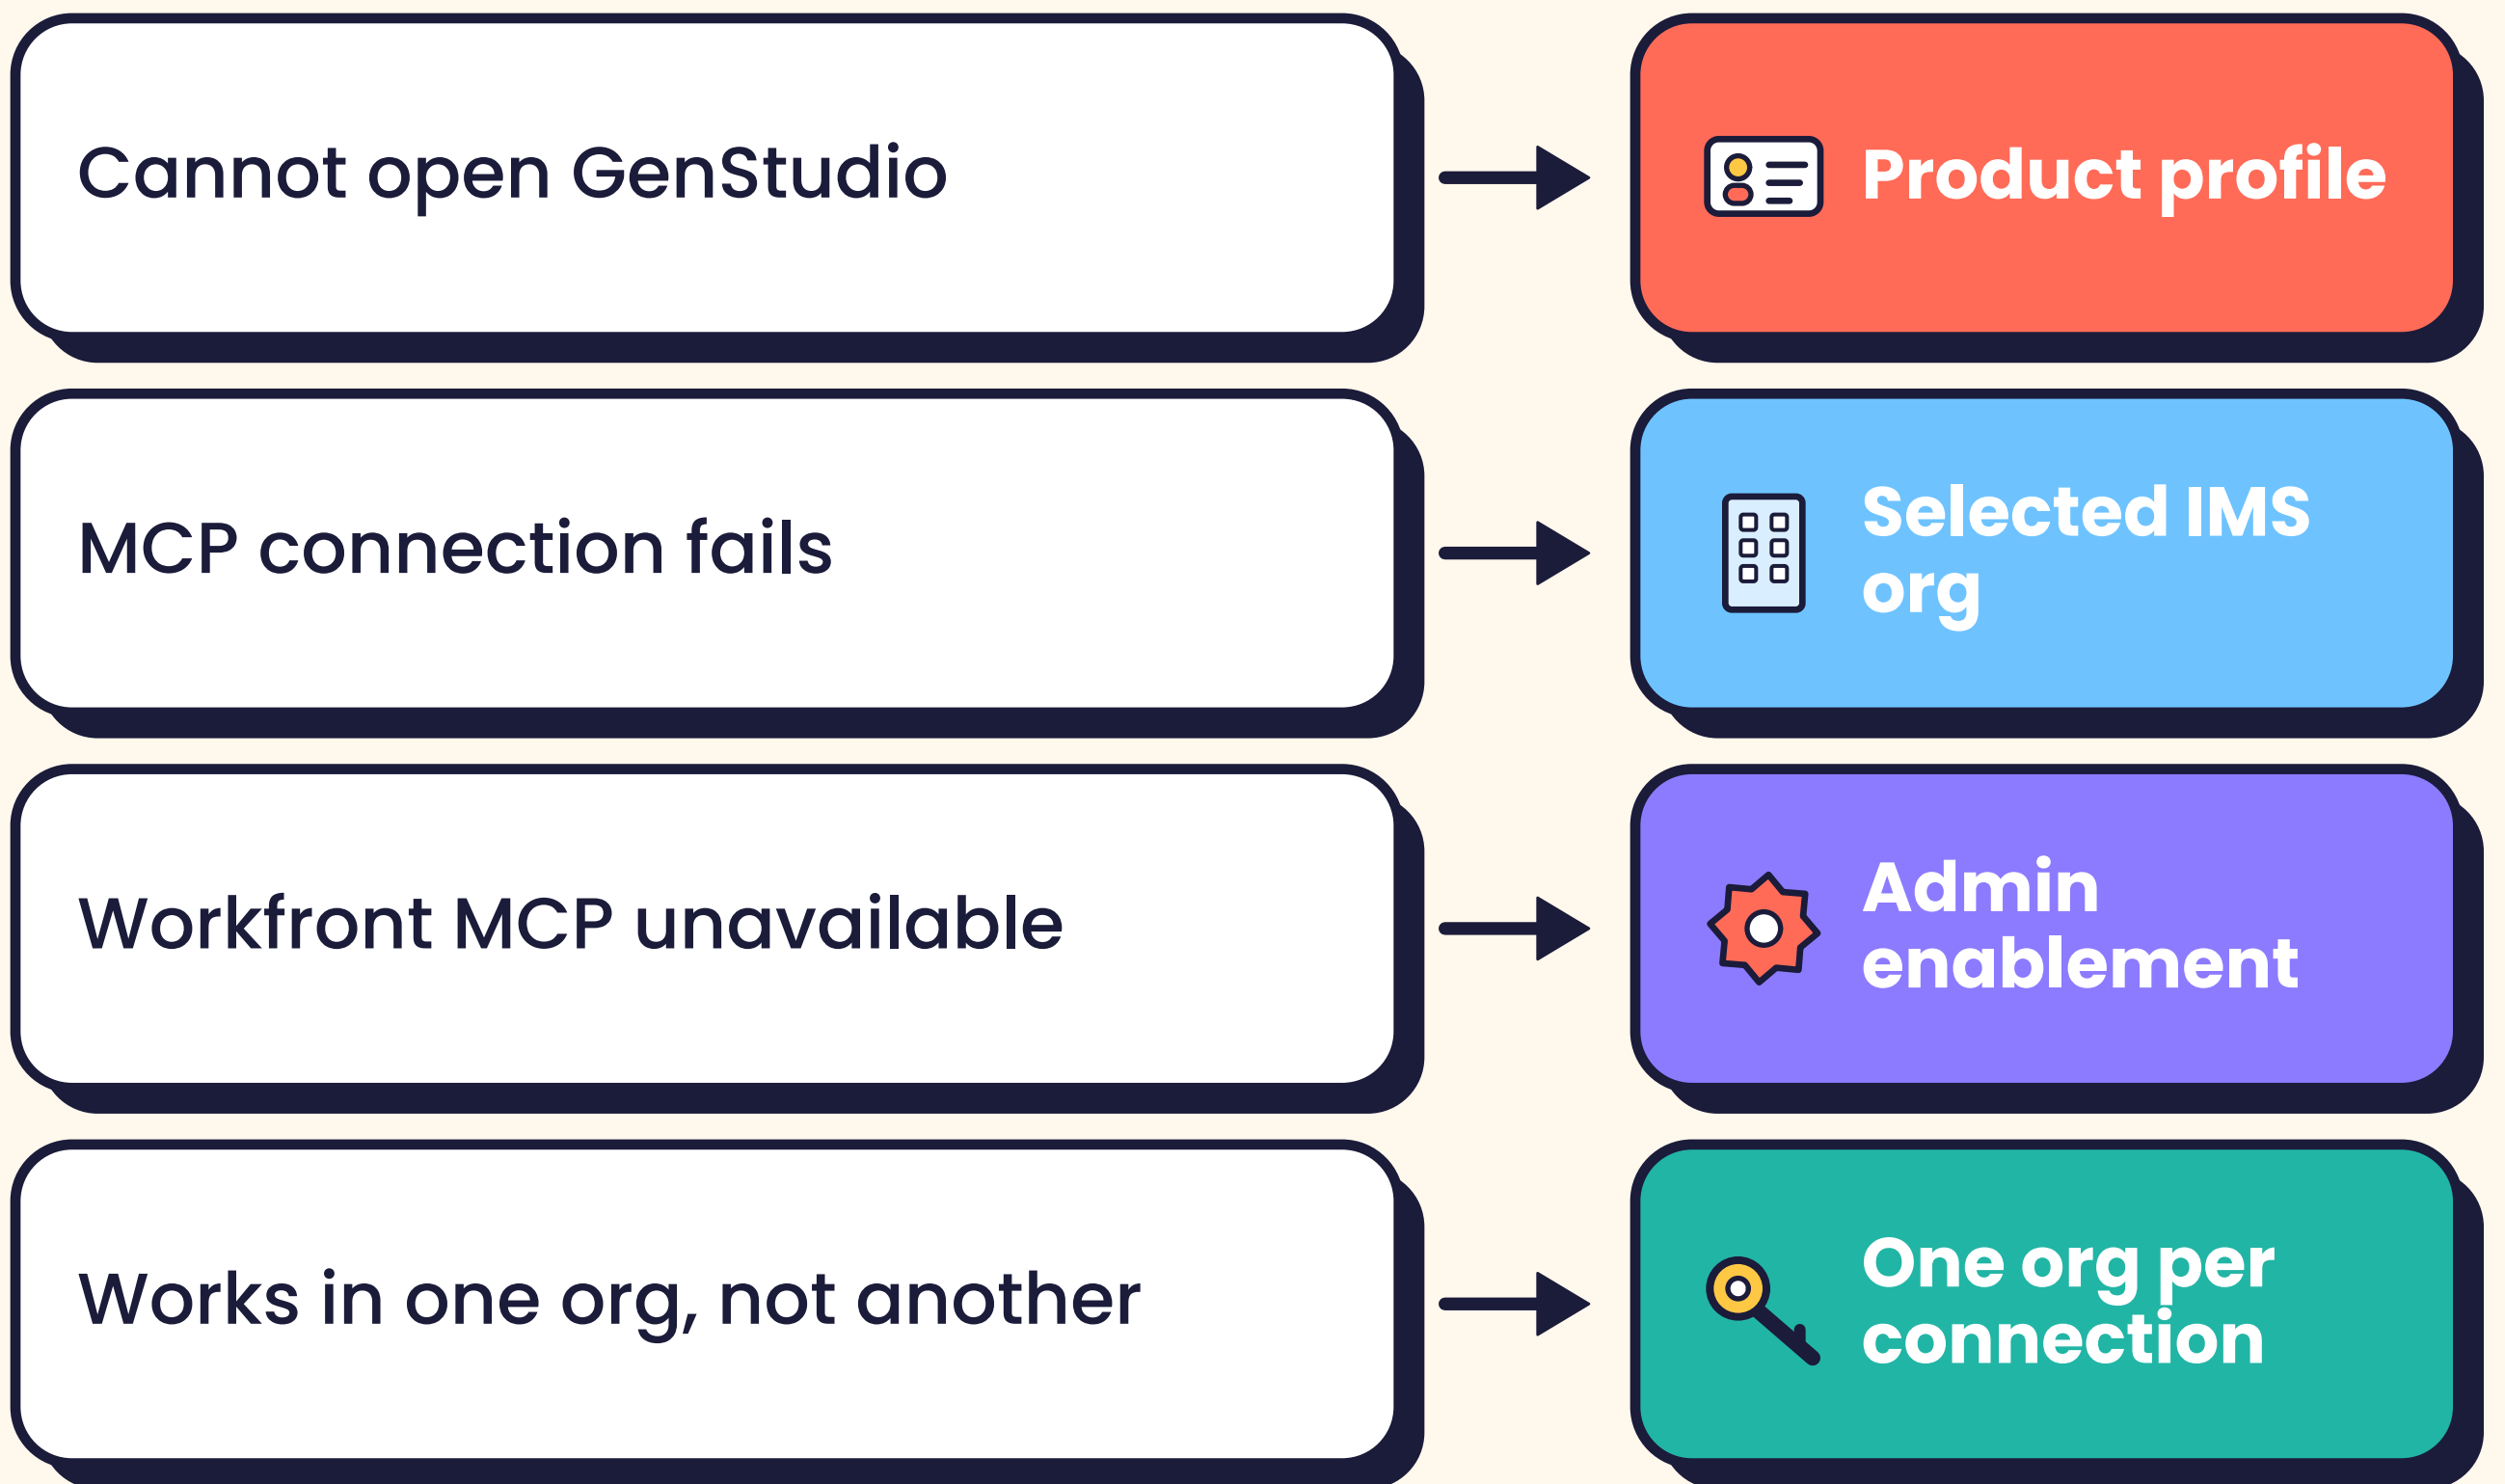

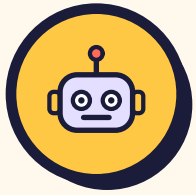

Don't fix it in the app

Permissions are not configured only inside GenStudio. Admin Console settings apply.

3 Symptom to first check

Where to look before you file a ticket.

Agentic angle

Agents and MCP servers act as the signed-in user. They reach only what the user's product profile allows.

ADOBE TOOLS TO KNOW

Adobe MCP servers (OAuth via IMS)

DOCUMENTED

Workfront MCP server

DOCUMENTED

Product profiles in Admin Console

DOCUMENTED

Best practices

Add agent access to onboarding acceptance checks.

Provision through groups linked to product profiles.

On failure, check the selected IMS org first.

ADOBE DOCS

Enable Workfront MCP and confirm region before rollout.

ADOBE DOCS

Untagged items are design advice.
