

One org, isolated by groups

Not a tenant per brand.

groups, not tenants

isolation lives in permissions

1 Tenant per brand vs one org

Same isolation goal, very different cost.

✗ Org per brand

Split identity

Split reporting

Split workflow

Every new brand is a migration

✓ One org, one instance

Groups and product profiles

Workspaces for team boundaries

Folder and record permissions

New brand = groups + workspace

2 How isolation is built

One IMS org, one Workfront instance.

3

Embargoed launch, several agencies

Coordinate in one place. Separate by permission.

Workfront

coordination stays in one instance

group permissions

AEM

lock the binaries by the same rule

same rule

Agencies

scoped groups, not new tenants

least access

Email

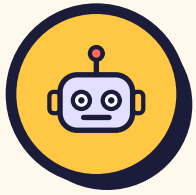

is not the NDA bus

avoid

The test

Adding a brand should mean creating groups and a workspace, not standing up a tenant.

Agentic angle

Workfront AI Collaborators run as permissioned users, so group isolation carries over. Avoid one broad account across brands.

Governed collaborator registry

DOCUMENTED

Workfront MCP server

DOCUMENTED

Status as of Sept 2026. Confirm in your own tenant.

Sources on slide 7

Best practices

Give each agent the narrowest identity that fits.

Test isolation: same prompt, users from two brands.

Check agent reach in embargoed groups first.
