

Workspaces should look like your team

Shared core, tailored edges.

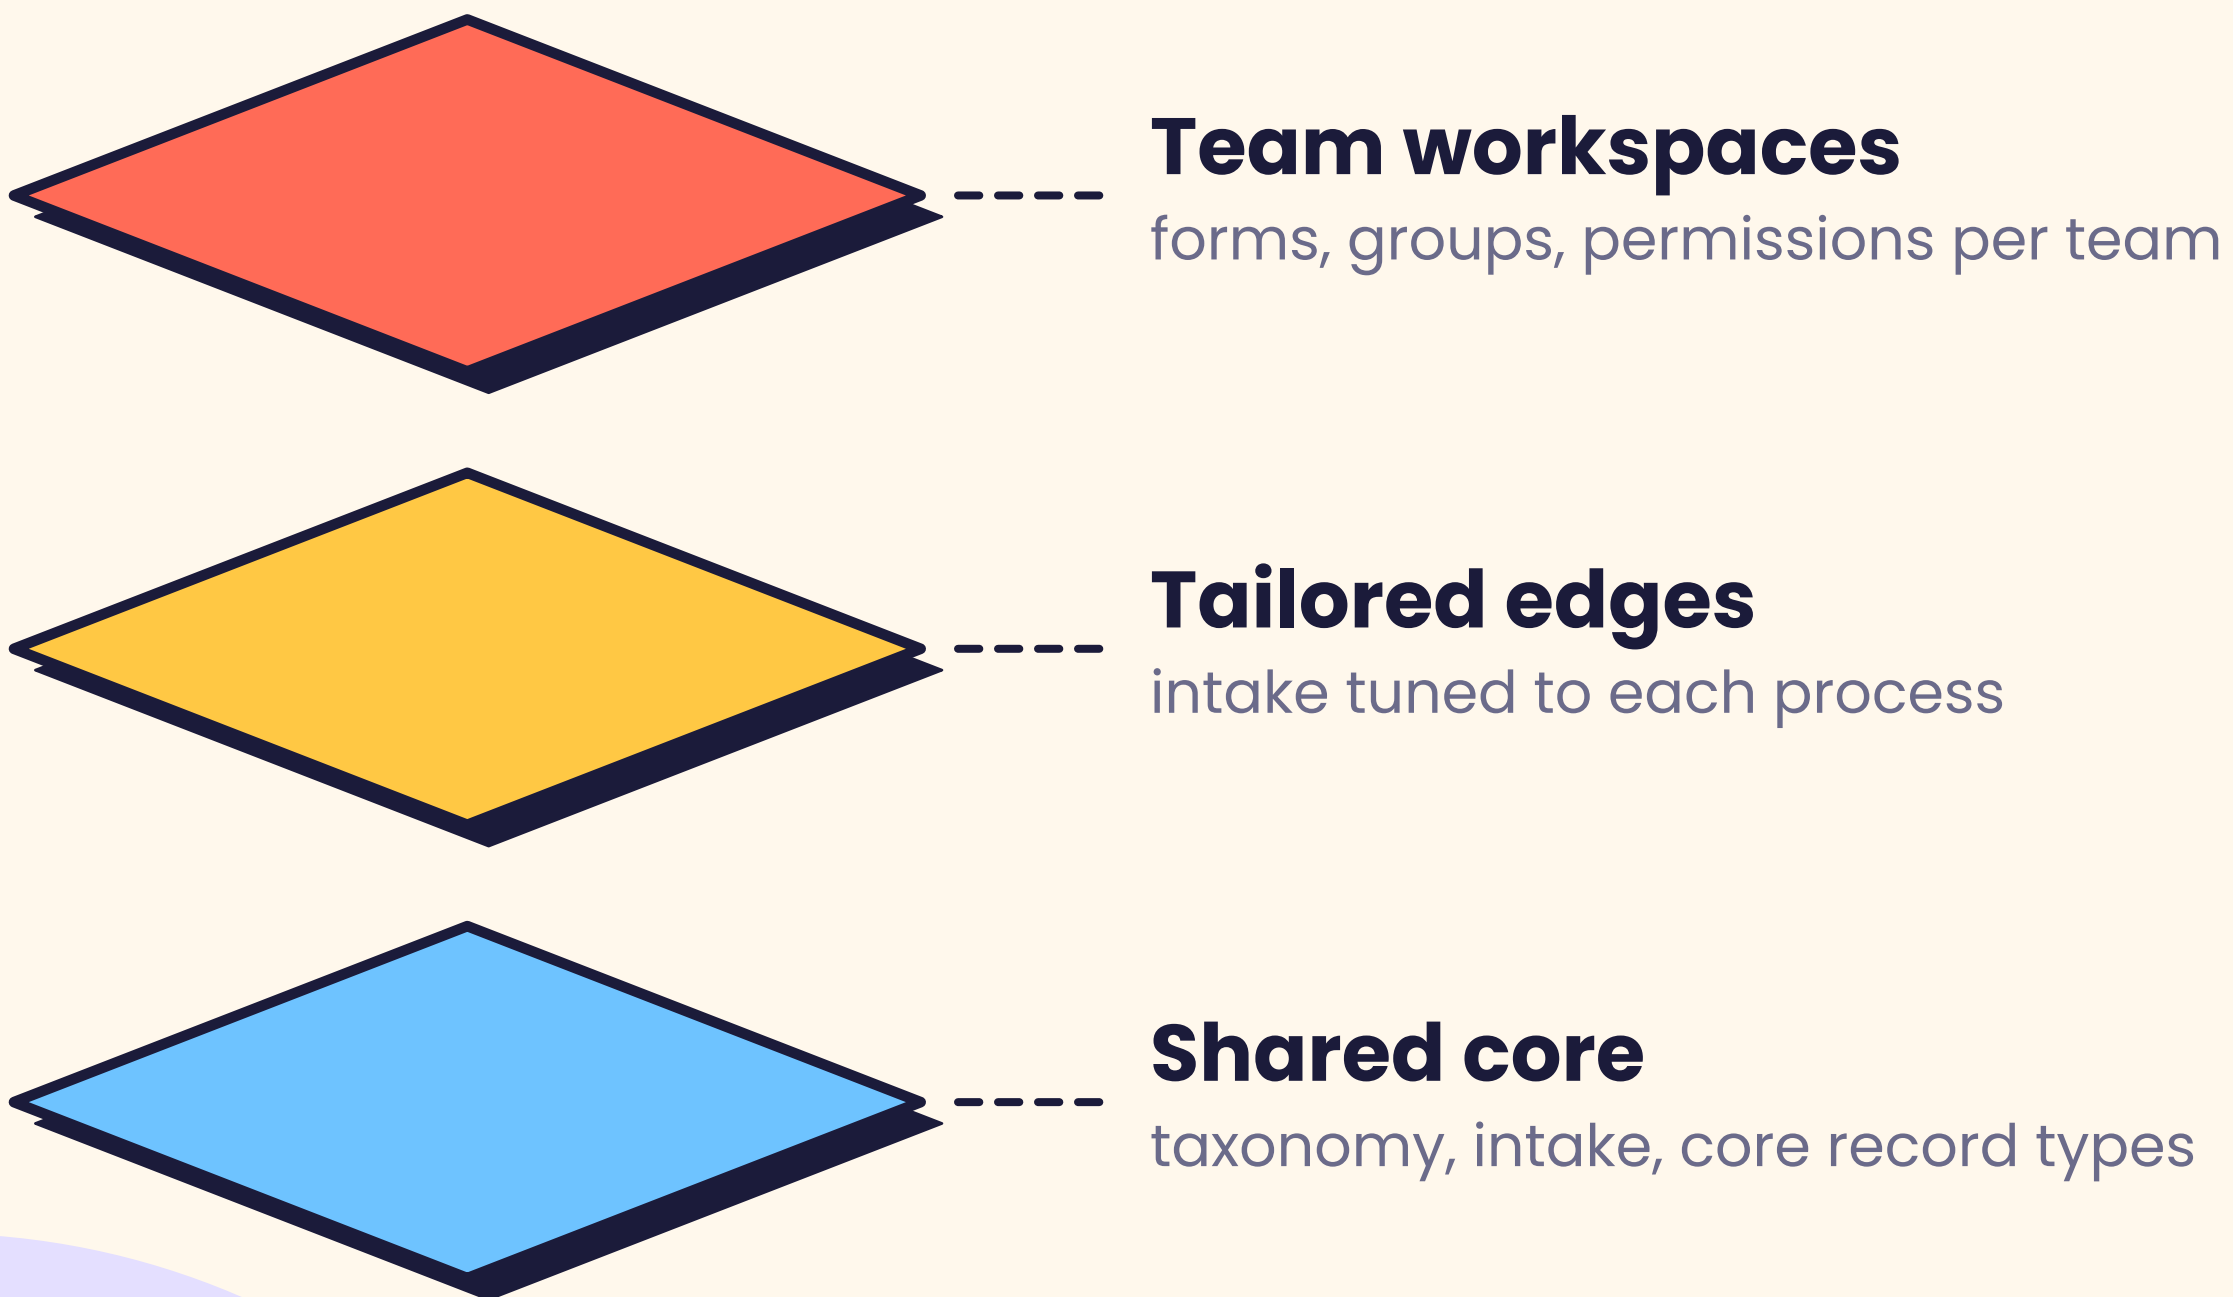

same field names

so reporting works across BUs

1 Shared core, tailored edges

Design it like any multi-tenant app.

Rule

Separate Planning workspaces per BU only work if the core taxonomy is identical.

2 The teams behind one platform

Each gets an edge on the same core.

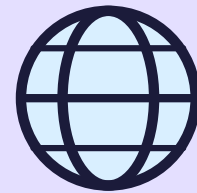

Creative

Brand

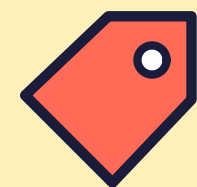

Product Marketing

Field Marketing

Compliance

Shared taxonomy
the common core

3 Channel vs Media Type

Mismatched names cannot be queried across.

Each BU invents its own

A field called 'Channel'

A field called 'Media Type'

Unconstrained personal workspaces

Reports cannot reconcile

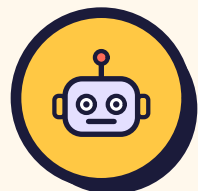

Shared core first

One name per field

Core record types and statuses

No unconstrained personal workspaces

Reports work across BUs

Agentic angle

Workflow Optimization Agent can build Planning workspaces from plain language. Publish the shared taxonomy first.

Best practices

Publish core record types and statuses first.

Review agent-built workspaces against the shared core.

Keep personal workspaces out of scope.
