

Don't use Workflow as a strategy tool

Split Planning from execution.

the shadow calendar

each layer, one job

1 Planning owns strategy. Workflow owns execution.

One data model, two jobs.

2 How the shadow calendar appears

A data-model problem, not a discipline problem.

Strategy

annual strategy
modeled as projects

wrong layer

The tree

campaigns and
deliverables in one
hierarchy

custom fields

The gap

no year-at-a-glance
view

so a sheet appears

The fix

add Planning, slim
down Workflow

cheaper than a rebuild

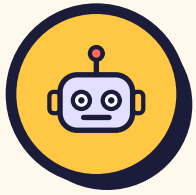

Skip the rebuild

Rebuilding Workflow adds complexity to the layer that was not the problem.

3 Move it to the right layer

Where each object belongs.

Agentic angle

Planning agents turn goals into plans and projects. Point them at Planning for strategy and Workflow for execution.

ROADMAP

Status as of Sept 2026. Confirm in your own tenant.

Sources on slide 7

Best practices

Keep strategy in Planning; give agents execution structures in Workflow.

Define approved templates agents may instantiate.

ADOBE DOCS

Retire the shadow spreadsheet first.
