

Type it once

Carry Planning metadata into Workflow.

metadata travels

entered once, at the origin

1 Convert the record, don't re-collect

Brief approved. Production starts.

Brief approved in Planning

audience, campaign ID, market, channel

Automation converts the record

to a Workflow program or project

Metadata carried forward

inherited by every downstream object

Custom form pre-populated

from the originating record

2 Data contract vs re-typing

Same data, typed twice, drifts.

Handoff without a contract

Form asks for the same fields

A lookup that only references

A spreadsheet as go-between

The second version drifts

Handoff with a contract

The record converts to a project

Fields are pre-populated

Entered once, at origin

Downstream objects inherit

3 Where agents fit

Judgment on top, not the contract.

Draft tasks

from an approved brief

agent work

Keep rules

required metadata
stays deterministic

conversion rule

Validate

check records against
controlled values

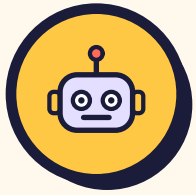

before Workflow

Prompt steps

Fusion MCP Agent
module

needs an LLM key

Agentic angle

Let agents draft tasks from a brief. Keep required metadata on deterministic record conversion.

Best practices

Keep required metadata on deterministic paths.

Validate agent-created records against controlled values.

Use agents for judgment: brief to task descriptions.
