

Free-text fields break your reports

Controlled vocabularies are a schema decision.

free text

fix it in the schema

1 From free text to one value

Every typo lands in your report.

✗ Free text

'Paid Social'

'paid-social'

'PS'

A count per spelling

✓ Controlled list

One dropdown value

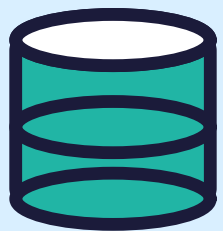

Filters work

Counts add up

Agents answer completely

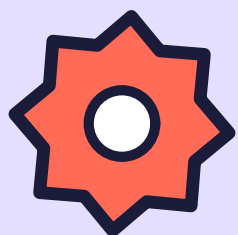

2 Product data without re-keying

ERP and PIM stay the master.

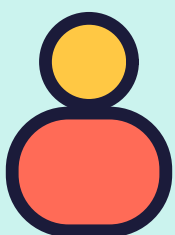

ERP or PIM holds the attributes

prices, SKUs, attributes

Fusion writes them into Workfront

into typed fields

Marketers pick, never re-key

and agents read clean fields

3 Dimensions to lock down first

Start with what leadership filters by.

Campaign name

controlled or generated

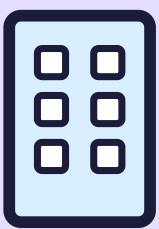

record type

Channel

a single list of values

dropdown

Business unit

shared across
workspaces

core taxonomy

Region

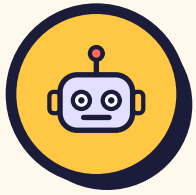

one code set

no free text

Audit tip

Export one dimension and count the distinct values. The number makes the case for a controlled list.

Agentic angle

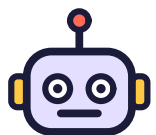

Natural-language queries are only as reliable as your field values. 'Paid Social' and 'paid-social' split agent answers too.

DOCUMENTED

Data Insights Agent (CJA)

DOCUMENTED

Fusion MCP Agent module

RELEASED

Status as of Sept 2026. Confirm in your own tenant.

Sources on slide 7

Best practices

Fix vocabularies at the schema before natural-language access.

Keep ERP and PIM as master; write fields with Fusion.

Spot-check agent answers against a standard report.
