

Approval should be an event

Frame.io to Workfront and AEM, no email.

one human step

no download, no email

1 One approval, three updates

Frame.io to Workfront and AEM.

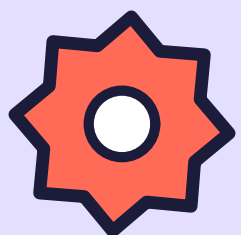

Approve in Frame.io

the only manual step

Webhook or Custom Action

fires on approval

Fusion scenario

safe to re-run

Task status

AEM metadata

Approved version

2 Relay vs event

Same approval, fewer hands.

✗ Manual relay

Download the file

Email the project manager

Upload to the DAM

Update the task by hand

✓ Event-driven

Webhook or Custom Action

Scenario updates status

Approved version attached

Metadata written

3 Design out two anti-patterns

And add two safeguards.

Polling

scheduled polling as the main pattern

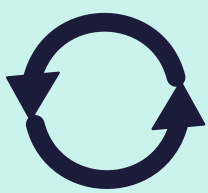

latency

Email

as the transport for embargoed work

outside permissions

Idempotent

events can arrive more than once

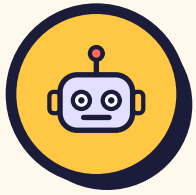

re-runnable

Audit

Change History captures review activity

audit trail

Agentic angle

Put an agent reviewer before the human step. The human approval fires the event, and the scenario must be re-runnable.

ADOBE TOOLS TO KNOW

Unified review (Workfront + Frame.io)

Sources on slide 7

Best practices

Agent reviewer first; human approval fires the event.

Make the Fusion scenario idempotent.

Keep the audit trail of agent checks and human decisions.
