

Native first, Fusion second, custom last

A decision order for every integration.

in this order

less code to maintain

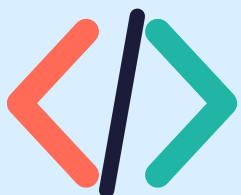

1 The four questions

Ask them in order.

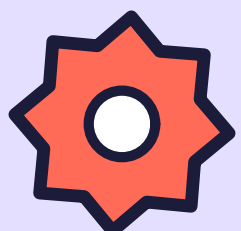

Native connector or agent?

in-product capability first

Does it live in the product?

App Builder: panels, embedded Express

Do systems exchange data?

Fusion: ERP, PIM, Jira, Salesforce

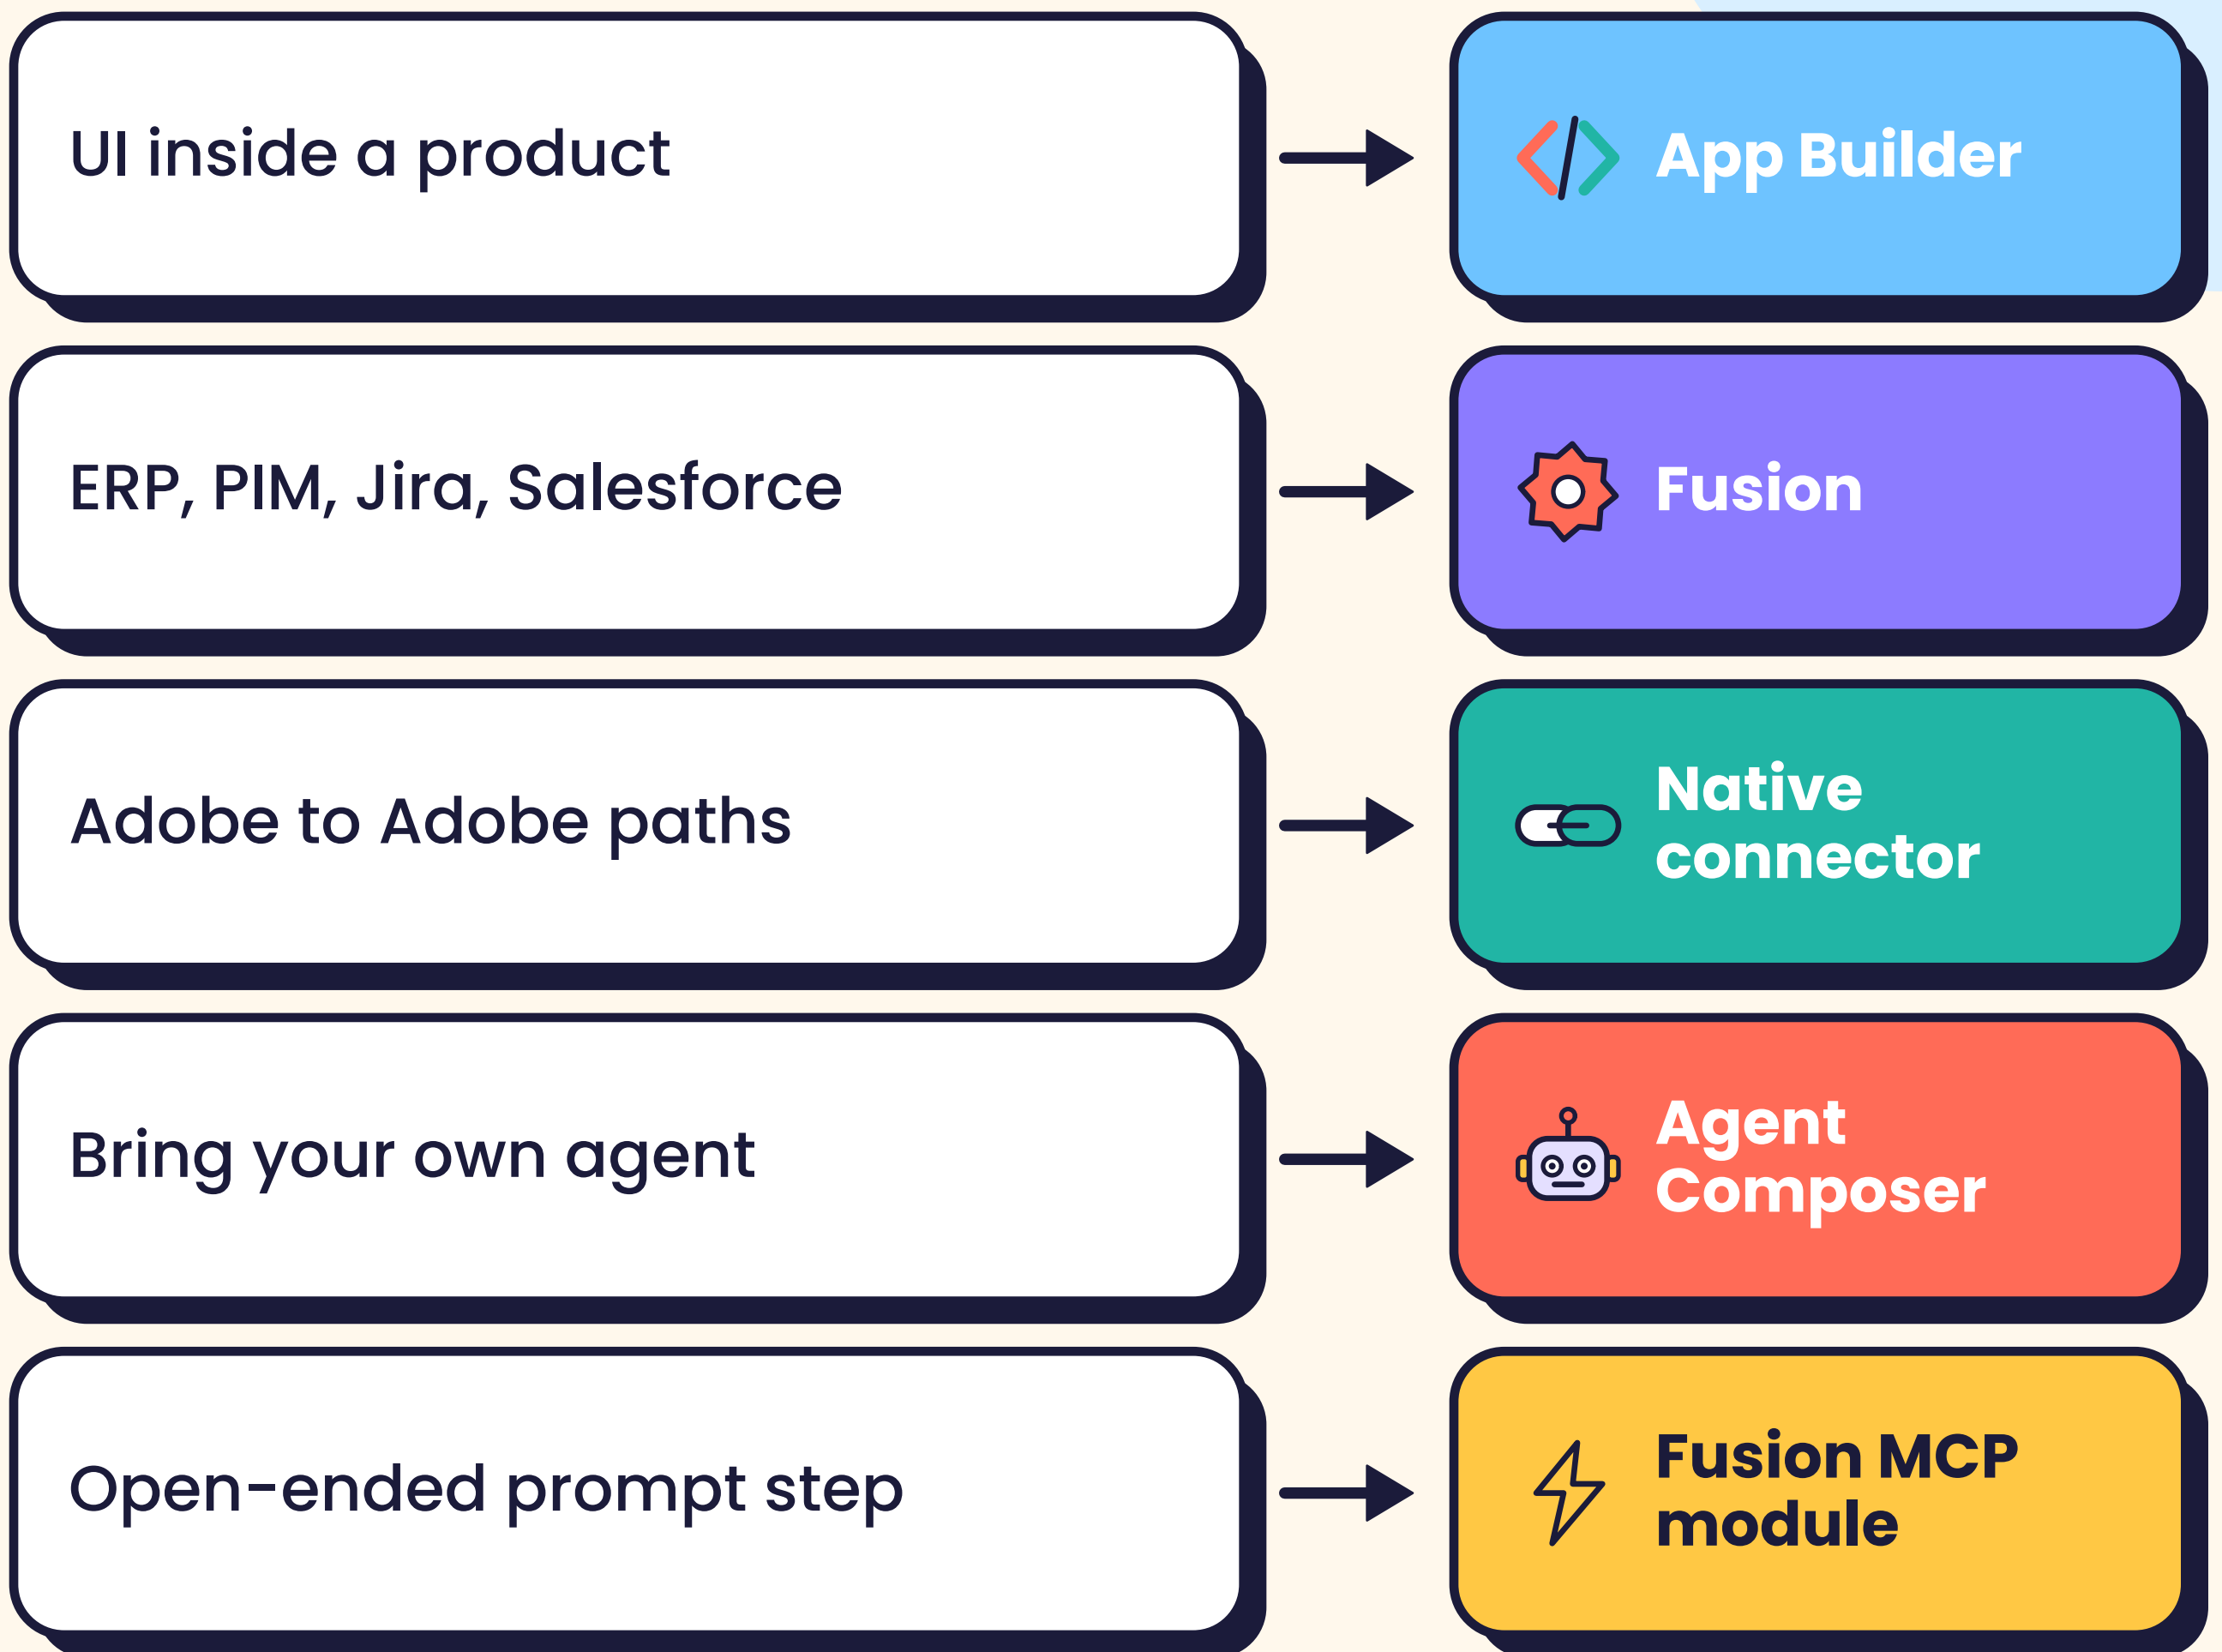

Only then: a custom API

code you maintain for years

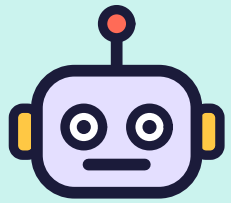

2 Don't swap the roles

Each tool has one job.

3 The agent-era tiers

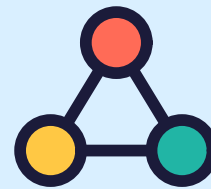

The same filter, extended.

Native agents

Content Advisor,
Journey Agent, more

documented

MCP servers

OAuth through IMS

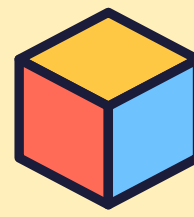

documented

Fusion MCP module

needs an LLM key

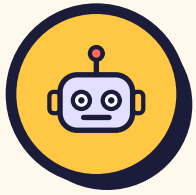

released Feb 2026

Agent Composer

SDK and Registry

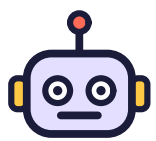

verify GA scope

Agentic angle

Extend the filter for agents: native agent, Adobe MCP server, Fusion MCP module, bring-your-own agent, custom code last.

ADOBE TOOLS TO KNOW

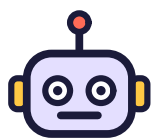

Native agents and MCP servers

DOCUMENTED

RELEASED

Agent Skills and APIs for Builders

DOCUMENTED

Agent Composer, SDK, Registry

VERIFY

Status as of Sept 2026. Confirm in your own tenant.

Sources on slide 7

Best practices

Try the native agent before building an integration.

Use Fusion MCP for open-ended steps only.

Configure the LLM key and MCP servers first.

ADOBE DOCS

Register custom agents where they can be governed.

Untagged items are design advice.
